

We cannot ignore pain!

Why hurt, when you can prevent it?

Why are we always so concerned about our everyday problems and why do we pay attention to our health only when it is too late...?

Did you know that 1 out of 10 people aged over 50 present bone pain and severe disablement, meaning arthrosis?

Arthrosis is a disease in which the cartilage that protects and covers the joint bones' surfaces gets damaged. In time, if those bones are not separated by this cartilage, they will start rubbing against each other, causing a terrible pain, physical disablement and invalidity.

That is the reason why we should be informed about this problem, so that we can prevent complications which might lead to surgical interventions and even to knee prosthesis.

Did you know that... the concentration of hyaluronic acid in the knees is of 2-3 mg/ml, but it decreases as you are getting older? In order to protect the joint bones and keep a good physical mobility you need to compensate this lack of hyaluronic acid.

**That is the reason why we decided to have a promotional campaign to prevent arthrosis.**

Research has proved that the combination of hyaluronic acid and chondroitin works best in order to protect the joint bones and to eliminate pain. It also stimulates the production of synovial liquid, provides nourishment and helps the joint bone tissue heal. So, the two above mentioned elements help the cartilage function again.

For the patients diagnosed with arthrosis we recommend an innovative product: viscoelastic injections.

**Orthoflex one®** is a 3 ml prefilled sterile syringe, which contains an injectable viscoelastic solution of 60 mg of hyaluronic acid and 90 mg of chondroitin sulphate. The injection is to be administered in the joint and it will definitely lead to an improvement of the joint functioning and to the recovery of the cartilage.

With only one injection administered by an orthopedic specialist doctor or by a rheumatologist you shall immediately be able to notice pain relief. The effects of the injection may last up to 1 year, thus avoiding any other complications or a painful massage:

... if only you came earlier...

**ORTHOFLEX one®** is produced according to Good Manufacturing Practice (GMP) and ISO13485, being certified as a system with high quality ingredients, CE marked medical device, being in accordance with the European Directive 93/42/EE.
